

BYHEIR WISE

Engineering Leader | Servicing & Collections Systems | Fintech, Regulated

Bear, DE | byheir.com | wiseforge.dev | linkedin.com/in/byheir-wise

SUMMARY

Engineering leader with 8+ years building and owning the high-stakes systems behind lending, servicing, and collections inside a federally regulated bank — and a career that started on the front line of collections and personal-loan servicing before moving into engineering. I architect full-stack production systems, stay close to the code, guide architectural decisions, and raise the bar for the teams I lead. Deep fintech domain fluency (delinquency, recovery, cost-to-collect, compliance reporting) paired with hands-on AI applied to operational efficiency. I partner naturally across Product, Risk, Operations, and Compliance, and I bring calm judgment to systems where reliability and data integrity are non-negotiable.

WHAT I BRING

- **Servicing & collections domain:** Career spanning collections, personal-loan servicing, and 8 years of lending engineering/data — fluent in delinquency, recovery, cost-to-collect, and repayment performance
- **High-stakes systems:** Architected and operated production systems where reliability, data integrity, and audit defensibility were hard requirements; calm under regulatory scrutiny
- **Full-stack & architecture:** .NET/C# (8+ yrs architecting production systems), microservices, REST APIs, OAuth/OIDC, Kubernetes, AWS, Terraform, GitOps; SQL Server, Snowflake; React/TypeScript
- **Team leadership:** Led teammates through product and platform transitions — mentorship, work review, raising the technical bar, and unblocking when it mattered most
- **Cross-functional partnership:** 8 years as the technical translator between engineering and Product, Operations, Compliance, and senior leadership — aligning technical and non-technical stakeholders

EXPERIENCE

Lead Data Analyst

Jun 2026 – Present

LendKey Technologies

Lead analytics and data systems across a fintech lending platform, partnering with business and operations stakeholders on the reporting and tooling that drive servicing decisions.

Lead Business Execution Consultant — Software Engineering & Data

Apr 2018 – Jun 2026

SLM Corporation (Sallie Mae Bank)

- Architected and owned production systems end-to-end — an ASP.NET application on a SQL Server/Snowflake backend deployed on AWS — feeding the company-wide compliance and quality-control matrix, with hard requirements on uptime, data integrity, and audit traceability.
- Led 4–6 engineers and analysts through product and platform transitions — onboarding, mentorship, work review, and raising the technical bar while staying hands-on in the code.
- Partnered across Operations, Compliance, and senior leadership to translate ambiguous, high-stakes requirements into reliable systems serving 1,000+ business users across collections, fraud, compliance, and servicing.
- Built AI-powered documentation and test-automation tooling and a SAS-to-Python conversion pipeline — applying AI to accelerate engineering velocity and cut manual reporting effort 60%.
- Operated calmly under audit and regulatory scrutiny, with intellectual honesty about system tradeoffs and what the data could and could not support.

Personal Loan Specialist & Collections

Jun 2017 – Apr 2018

SLM Corporation (Sallie Mae Bank)

Started on the front line of collections and personal-loan servicing — direct exposure to the borrower-repayment, delinquency, and recovery workflows these systems exist to serve.

SELECTED PRODUCTION WORK

Live demos and case studies at byheir.com — flagship AI product at wiseforge.dev

Simplicity by WiseForge — Production Claude-powered product shipped solo

wiseforge.dev

Designed, built, and deployed an AI product end-to-end — streaming APIs, OAuth 2.0 + PKCE, multi-provider model routing, usage enforcement, and Stripe subscriptions — owning every architectural decision.

EDUCATION

Bachelor's Degree in Business Management | Wilmington University
